

ETech Services

Contractor and Augmentation Services

Service Overview

Challenge

- Do you require an enhanced staff to meet accelerating demand to develop, manufacture or perform at rapid rates?
- Do you need someone with extensive experience but do not have the time to find and screen these individuals?
- Is employing recruiting resources not a financially viable option?

Solution

Since August of 2012, a subsidiary of E-Technologies Group, ETech Services, has been delivering qualified candidates, sourced and screened through a comprehensive process for our clients.

ETech Services provides our clients with experienced candidates available for contract, contract to hire, and direct hire opportunities. We are different from the dozens of other recruiters and staffing companies you deal with for two reasons. First, we are engineering and information technology experts. Our customers have long recognized and praised our ability to hire and train the best and we are turning that service back over to our customers. Second, we can do it in a more cost effective way than almost anyone else. As a subsidiary we do not have to worry about keeping on the lights or paying for large overhead budgets. We have established processes and are simply adding more employees through our process.

ETech Services has provided contract staffing services for several of the largest companies in the country and abroad. Our team partners with clients to select the right individuals from locations around the country.
